James Haworth

Software Engineer | York, UK (relocating to London or Cambridge, 2027)
james@jhaworth.ai | linkedin.com/in/jameshaworthcs | github.com/jameshaworthcs | j-h.ai

Education

University of York York, UK
BEng Computer Science with Artificial Intelligence (with a year in industry) *09/2023 – 06/2027*

- Second year: First-class (73.5%); Data Science 79%, Advanced Computer Systems 79%, Machine Learning 78%
- Final year: capstone on improving WHOIS with ML; Deep Learning, NLP, LLMs, Cloud-based Data Analysis

Richard Hale School Hertford, UK
A-Levels: Computer Science, Physics and Mathematics; EPQ (A); Duke of Edinburgh Gold* *09/2016 – 06/2023*

Experience and Projects

ETAS (Bosch Group) York, UK
Field Application Engineer (part-time) *07/2026 – Present*

- Own AI tooling for the team: onboarded colleagues to Claude Code and GitHub Copilot (most use them weekly); wrote agent skills that investigate tickets and fact-check replies; some now take minutes, not hours
- Track recurring RTA-CAR UI/UX issues through hands-on use and customer, first-line and internal Jira tickets (JQL filters, automation); my ongoing reports to product owners have moved neglected fixes forward

Software Engineering Intern (placement year) *07/2025 – 07/2026*

- Resolved 170+ support tickets from car makers and Tier-1 suppliers worldwide on RTA-CAR (AUTOSAR Classic): reproduced faults in C, found root causes and escalated around 80 defects to R&D, most confirmed
- Overhauled the team's broken Jenkins CI/CD pipeline (Groovy, Python) for customer demo projects: releases, once mostly by hand over several hours, now run reproducibly in under an hour; adopted as the team standard
- Arranged a taster with the internal DevOps team: wrote Terraform; built a Grafana dashboard for its Artifactory and Bitbucket migration, pre-aggregated in InfluxDB; the lead proposed one per product line
- Led deployment of a public-facing MkDocs documentation site to replace PDF documentation, through conflicting opinions and changing requirements across technical authors and management; ready to go live
- Rated by supervisor as "consistently contributing at a level comparable to his full-time peers"

Verified Handles (JEM Media Ltd) London, UK
Founder & Lead Developer *11/2020 – Present*

- Founded and run verifiedhandles.org, a public directory of verified social handles for 155,000+ public figures and organisations (nearly all linked to Wikidata); in 2026, rebuilt it as one TypeScript/PostgreSQL platform replacing MediaWiki, PHP and Python bots; migrated all 591k revisions with zero data loss; live since 09/2026
- Designed its architecture, hosting (nginx, Varnish) and monitoring (Prometheus, Grafana); built it with parallel Claude Code agents in isolated clones, each change gated by 10,000+ tests and staging
- Built the Go OAuth 2.0/OpenID Connect provider behind the site's sign-in
- Built an MCP server (120+ tools) and run the live directory through it with AI agents; an agent can do nothing its user couldn't, and nothing by accident

York Wines York, UK
Website/SEO Strategist *06/2024 – 05/2025*
Web Development Intern *03/2024 – 06/2024*

- Offered a contract after the internship, then an extension (owner's video testimonial: j-h.ai/york-wines)
- Grew online sales by 30% and website traffic by 20% over my time there through SEO, site integrations and UX

Counting House | *TypeScript, React, Hono* github.com/jameshaworthcs/countinghouse

- Open-source, local-first UK personal finance tracker (50+ GitHub stars) that turns bank statements and screenshots into validated data; built an eval comparing Claude with local models on my llama.cpp gateway

Technical Skills

Languages: Python, TypeScript/JavaScript, Go, Java, C, Groovy, SQL
Frameworks & Data: React, Next.js, Node.js, PostgreSQL, InfluxDB, Prometheus, MkDocs
AI: PyTorch, scikit-learn, LLM APIs, Model Context Protocol (MCP), llama.cpp
DevOps & Tools: Jenkins, Git, Docker, Linux, Grafana, Terraform, Jira Service Management, Google Cloud, AWS
Automotive: RTA-CAR (AUTOSAR Classic), ISO 26262 functional-safety training
