James Haworth

Software Engineer | London and Cambridge, UK
james@jhaworth.ai | linkedin.com/in/jameshaworthcs | github.com/jameshaworthcs | j-h.ai

Education

University of York — York, UK
BEng Computer Science with Artificial Intelligence (with a year in industry) — *09/2023 – 06/2027*

- Second year: First-class average (73.5%); top modules: Data Science (79%), Advanced Computer Systems (79%), Machine Learning & Optimisation (78%); 96% in a first-year Java practical exam
- Final year: Deep Learning, Natural Language Processing, Large Language Models, Cloud-based Data Analysis

Richard Hale School — Hertford, UK
A-Levels: Computer Science, Physics and Mathematics; EPQ (A); Duke of Edinburgh Gold* — *09/2016 – 06/2023*

Experience

ETAS (Bosch Group) — York, UK
Field Application Engineer (part-time, retained as an expert after the placement) — *07/2026 – Present*
Software Engineering Intern, Field Application Engineering (placement year) — *07/2025 – 07/2026*

- Own the team's AI enablement (since 09/2026) and lead its shared agent-skills repository: onboarded colleagues to Claude Code and GitHub Copilot, now used weekly by over half the team
- Write agent skills that investigate a support ticket from scratch, draft a Jira comment and fact-check it; some investigations now take minutes instead of hours
- Resolved 170+ RTAHotline support tickets from automotive OEMs and Tier-1 suppliers worldwide using RTA-CAR (AUTOSAR Classic): reproduced faults, found root causes and escalated around 80 defects to R&D
- Overhauled the team's long-broken Jenkins CI/CD pipeline (Groovy) that builds, tests and releases customer demo projects, cutting release time from several hours to under an hour; adopted as the team standard
- Led SKDocs, a public-facing documentation site built with MkDocs and Jenkins, now ready to go live; agreed editorial standards across departments and helped shape the department's documentation strategy
- Built and debugged internal tools; reduced model API costs with cheaper subagent models and less context
- Rated by supervisor as "consistently contributing at a level comparable to his full-time peers"

Verified Handles (JEM Media Ltd) — London Area, UK
Founder & Lead Developer — *11/2020 – Present*

- Founded and run verifiedhandles.org, a public directory of verified social handles for 155,000+ public figures and organisations, 153,000+ linked to Wikidata
- Rebuilt it in 2026 as one TypeScript/PostgreSQL platform, replacing MediaWiki, PHP and Python bots; migrated all 591k historical revisions with zero data loss; live since 09/2026
- Designed and directed the rebuild with parallel Claude Code agents, each in its own clone and gated by tests and staging before release; built JEMEDIA Accounts, the Go OAuth 2.0/OIDC provider behind sign-in
- Created an MCP server with 120+ tools and use it to manage the live directory with AI agents; designed so an agent can do nothing its user couldn't, and nothing by accident

RosettaPath — London Area, UK
Cyber Security and IT Engineer (part-time) — *07/2024 – 06/2025, 07/2026 – Present*

- Resolved the findings of a third-party security audit, including email authentication (DMARC)

York Wines — York, UK
Website/SEO Strategist — *06/2024 – 05/2025*
Web Development Intern — *03/2024 – 06/2024*

- Offered a contract after the internship, then an extension (owner's video testimonial: j-h.ai/york-wines)
- Grew online shop sales by 30% and website traffic by 20% through SEO, site integrations and UX work

Technical Skills

Languages: Python, TypeScript/JavaScript, Go, Java, C, Groovy, SQL, HTML/CSS
Frameworks & Data: React, Next.js, Node.js, PostgreSQL, MkDocs
AI: LLM APIs, Model Context Protocol (MCP), Claude Code, GitHub Copilot, llama.cpp, prompt engineering
DevOps & Tools: Jenkins, Git, Docker, Linux, Grafana, Jira Service Management, Google Cloud Platform, AWS
Automotive: RTA-CAR (AUTOSAR Classic), ISO 26262 functional-safety training
