James Haworth

Software Engineer | Available from 07/2027 | York, UK (willing to relocate)
james@jhaworth.ai | linkedin.com/in/jameshaworthcs | github.com/jameshaworthcs | j-h.ai

ETAS (Bosch Group) kept me on part-time after my year in industry. I build and run production systems and AI tooling, at work and in my own projects. I'm looking for a graduate software engineering role, ideally in applied AI.

Education

University of York York, UK
BEng Computer Science with Artificial Intelligence (with a year in industry) *09/2023 – 06/2027*

- Predicted First; second year First-class (73.5%): Data Science 79%, Advanced Computer Systems 79%, Machine Learning & Optimisation 78%
- Final year: capstone on ML entity resolution, linking WHOIS records to the companies behind them, measured against a published baseline; Deep Learning, NLP, LLMs, Cloud-based Data Analysis

Richard Hale School Hertford, UK
A levels: Computer Science, Mathematics, Physics; EPQ (A)* *09/2016 – 06/2023*

Experience

ETAS (Bosch Group) York, UK
Field Application Engineer (part-time) *07/2026 – Present*

- Lead the team's AI tooling: onboarded colleagues to Claude Code and GitHub Copilot, which most of the team now use weekly
- Write agent skills, alone and with colleagues: one investigates a support ticket from scratch and drafts a Jira comment, another fact-checks the draft; some investigations now take minutes, not hours
- Keep model API costs down by running subagents on cheaper models and keeping their context small
- Track recurring RTA-CAR UI/UX issues across product teams, from using the product and from customer, first-line and internal Jira tickets (JQL filters, some automation); my analysis for product owners has moved small fixes forward

Software Engineering Intern (placement year) *07/2025 – 07/2026*

- Resolved 170+ RTA-CAR (AUTOSAR Classic) support tickets from car makers and Tier-1 suppliers worldwide: reproduced faults in C, found root causes and escalated around 80 defects to R&D, most confirmed
- Worked with their engineers by email, call and in person, and stayed involved to coordinate many of the escalated defects with R&D
- Overhauled the team's Jenkins CI/CD pipeline (Groovy, Python) for customer demo projects: releases that took several hours, mostly by hand, now run reproducibly in under an hour; adopted as the team standard
- Built Jenkins pipelines for the documentation and Confluence pages, and to automate Git commits
- Volunteered to work with the internal DevOps team: joined its stand-ups and retrospectives, and brought what I learnt back to my team
- Built the DevOps team a Grafana dashboard tracking its migration from legacy Bosch tools to Artifactory and Bitbucket, pre-aggregating the data in InfluxDB; its lead proposed one like it for every product line
- Led the Jenkins deployment of a public documentation site to replace PDF documentation: agreed its scope and editorial standards with technical authors and management through changing requirements
- Rated by supervisor as "consistently contributing at a level comparable to his full-time peers"

Verified Handles (JEM Media Ltd) London, UK
Founder & Engineer *11/2020 – Present*

- Run verifiedhandles.org, a public directory of verified social handles for 155,000+ public figures and organisations, nearly all matched to Wikidata
- In 2026, rebuilt it as one TypeScript/PostgreSQL platform replacing MediaWiki, PHP and Python bots; migrated all 591k revisions with zero data loss; live since 09/2026

- Designed its architecture, hosting and monitoring: production and staging behind Google Project Shield, nginx and Varnish; Prometheus, Grafana and Loki for metrics, logs and alerts; daily backups
- Developed it by directing parallel Claude Code agents, each in its own clone, with every change gated by 10,000+ tests and a staging deploy
- Built the Go OAuth 2.0/OpenID Connect provider behind the site's sign-in
- Built an MCP server (120+ tools), listed in the official MCP Registry, through which AI agents run the live directory, with every write audited

York Wines York, UK
Website/SEO Strategist *06/2024 – 05/2025*
Web Development Intern *03/2024 – 06/2024*

- Offered a contract after the internship, then an extension (owner's video testimonial: j-h.ai/york-wines)
- Grew online sales by 30% and website traffic by 20% over my time there through SEO, site integrations and UX, using Google Analytics, Search Console, Tag Manager, Looker Studio and Merchant Center
- As intern, evaluated with management how the old website sold wine, and helped build the new one

RosettaPath London, UK
Cyber Security and IT Engineer (part-time) *07/2024 – 06/2025, 07/2026 – Present*

- Advise the directors on cybersecurity for the company's data and hardware, including full-disk encryption and backups
- Resolved the findings of a third-party security audit

McDonald's Hertford and York, UK
Crew Trainer (part-time) *10/2021 – 10/2024*

- Promoted to Crew Trainer, training new crew members in a fast-paced team
- Resolved card-payment and in-store screen faults during service, keeping customers served and queues moving

Projects

Counting House | *TypeScript, React, Hono* github.com/jameshaworthcs/countinghouse

- Open-source, local-first UK personal finance tracker: bank statements, CSV exports and screenshots go in; validated, git-versioned data comes out (spending, tax year, projections)
- Built a field-level eval of its import pipeline on synthetic CSV exports, PDF statements and phone screenshots: a fully local llama.cpp pipeline scores 99.3% on its 40 documents

Technical Skills

Languages: Python, TypeScript/JavaScript, Go, Java, C, Groovy, SQL
Frameworks & Data: React, Next.js, Node.js, PostgreSQL, InfluxDB
AI: PyTorch, scikit-learn, LLM APIs, Model Context Protocol (MCP), llama.cpp
DevOps & Tools: Jenkins, Git, Docker, Linux, Terraform, MkDocs, Jira
Cloud & Monitoring: Google Cloud, AWS, Prometheus, Grafana
Automotive: RTA-CAR (AUTOSAR Classic), ISO 26262 functional-safety training

Certifications and Activities

Functional Safety and ISO 26262 Deep Dive | *ETAS* 11/2025
CyberFirst Futures (SCQF Level 5) | *National Cyber Security Centre* 08/2021
The Duke of Edinburgh's Award, Gold 06/2023

- Volunteered with a Beaver Scout group and played and coached badminton; built and coded a competition robot on a residential at the University of Southampton; expeditions in Snowdonia and the Lake District
