James Haworth

Software Engineer | Available from 07/2027 | York, UK (willing to relocate)
james@jhaworth.ai | linkedin.com/in/jameshaworthcs | github.com/jameshaworthcs | j-h.ai

ETAS (Bosch Group) kept me on part-time after my year in industry. I build and run CI/CD pipelines, a public web platform and AI agent tooling. I'm looking for a graduate software engineering role.

Education

University of York York, UK
BEng Computer Science with Artificial Intelligence (with a year in industry) *09/2023 – 06/2027*

- Predicted First; second year First-class (73.5%): Introduction to Data Science 79%, Advanced Computer Systems 79%, Machine Learning & Optimisation 78%
- Final year: capstone on ML entity resolution, linking WHOIS records to the companies behind them, to be measured against a published baseline; Deep Learning, NLP, LLMs, Cloud-based Data Analysis

Richard Hale School Hertford, UK
A levels: Computer Science, Mathematics, Physics; EPQ (A)* *09/2016 – 06/2023*

Experience

ETAS (Bosch Group) York, UK
Field Application Engineer (part-time) *07/2026 – Present*

- Lead the team's AI tooling: onboarded colleagues to Claude Code and GitHub Copilot, which most of the team now use weekly
- Write agent skills: one investigates a support ticket from scratch and drafts a Jira comment, another fact-checks the draft; subagents on cheaper models with small contexts keep API costs down; some investigations now take minutes, not hours
- Track recurring RTA-CAR UI/UX issues across product teams, from using the product and from customer, first-line and internal Jira tickets (JQL filters, some automation); my reports to product owners have brought small fixes forward

Software Engineering Intern (placement year) *07/2025 – 07/2026*

- Overhauled the Jenkins CI/CD pipeline (Groovy, Python) for customer demo projects: releases that took several hours, mostly by hand, now run reproducibly in under an hour; adopted as the team standard
- Resolved 170+ RTA-CAR (AUTOSAR Classic) tickets from car makers and Tier-1 suppliers worldwide: reproduced faults in C, found root causes and escalated around 80 defects to R&D, most confirmed
- Worked with customers' engineers by email, by phone and in person, and coordinated many of the escalated defects with R&D
- Wrote Jenkins pipelines that build the documentation and Confluence pages and automate Git commits
- Volunteered to join the internal DevOps team's stand-ups and retrospectives; built the team a Grafana dashboard tracking its migration from legacy Bosch tools to Artifactory and Bitbucket, pre-aggregating the data in InfluxDB; its lead proposed one like it for every product line
- Led the Jenkins deployment of a public MkDocs documentation site to replace PDFs: agreed its scope and editorial standards with technical authors and management through changing requirements
- Supervisor's placement review: "consistently contributing at a level comparable to his full-time peers"

Verified Handles (JEM Media Ltd) London, UK
Founder & Engineer *11/2020 – Present*

- Run verifiedhandles.org, a public directory of verified social handles for 155,000+ public figures and organisations, nearly all matched to Wikidata
- In 2026, rebuilt it as a TypeScript/PostgreSQL platform replacing MediaWiki, PHP and Python bots; migrated all 591,000 revisions with zero data loss; live since 09/2026
- Designed its architecture, hosting and monitoring: production and staging behind Google Project Shield, nginx and Varnish; Prometheus, Loki and Grafana for metrics, logs and alerts; daily backups

- Developed it with parallel Claude Code agents, each in its own clone: I review every change, and each is gated by 10,000+ tests and a staging deploy
- Built the Go OAuth 2.0/OpenID Connect provider behind the site's sign-in
- Built an MCP server (120+ tools), listed in the official MCP Registry, through which I run the live directory with AI agents, every write audited

RosettaPath London, UK
Cyber Security and IT Engineer (part-time) *07/2024 – 06/2025, 07/2026 – Present*

- Advise the directors on cyber security for the company's data and hardware, including full-disk encryption and backups
- Resolved the findings of a third-party security audit

York Wines York, UK
Website/SEO Strategist *06/2024 – 05/2025*
Web Development Intern *03/2024 – 06/2024*

- Offered a contract after the internship, then an extension (owner's video testimonial: j-h.ai/york-wines)
- Grew online sales by 30% and website traffic by 20% over my time there through SEO, site integrations and UX, using Google Analytics, Search Console, Tag Manager, Looker Studio and Merchant Center
- As an intern, evaluated with management how the old website sold wine, and helped build the new one

McDonald's Hertford and York, UK
Crew Trainer (part-time) *10/2021 – 10/2024*

- Promoted to Crew Trainer, training new crew members in a fast-paced team
- Fixed card-payment and screen faults during service, keeping customers served and queues moving

Projects

Counting House | *TypeScript, React, Hono, llama.cpp* github.com/jameshaworthcs/countinghouse

- Open-source, local-first UK personal finance tracker: bank statements, CSV exports and screenshots go in; validated, Git-versioned data comes out (spending, tax year, projections)
- Built a field-level eval of its import pipeline on 40 synthetic CSV exports, PDF statements and phone screenshots: fully local on llama.cpp (Qwen3.6-35B-A3B), it reads 99.3% of 2,614 fields correctly

Technical Skills

Languages: Python, TypeScript/JavaScript, Go, Java, C, Groovy, SQL
Frameworks & Data: React, Node.js, Hono, PostgreSQL, InfluxDB
AI: PyTorch, scikit-learn, LLM APIs, Model Context Protocol (MCP), llama.cpp
DevOps & Tools: Jenkins, Git, Docker, Linux, nginx, Varnish, Terraform, MkDocs, Jira
Cloud & Monitoring: Google Cloud, Prometheus, Grafana, Loki
Automotive: RTA-CAR (AUTOSAR Classic), ISO 26262 functional-safety training

Courses & Awards

Functional Safety and ISO 26262 Deep Dive | *ETAS* 11/2025
CyberFirst Futures (SCQF Level 5) | *National Cyber Security Centre* 08/2021
The Duke of Edinburgh's Award, Gold 06/2023

- Volunteered with a Beaver Scout group; played and coached badminton; built and coded a competition robot on a University of Southampton residential; expeditions in Snowdonia and the Lake District
